Bitu79 2026-07-19 04:45:14 UTC #1 I stand before Google with the following clear technical evidence that cannot be denied, because it is based on unassailable software logic: When I press the delete button on the Google AI Studio interface, the system uses a deceptive label to lie to me that "my prompt will be permanently deleted after 30 days." In reality, this button does not delete the prompt, does not delete the chat, and does not destroy any backend object. All it does is move the launcher file belonging to the user interface – a simple JSON file – into the trash folder of my Google Drive. Google's diabolical plan was that since the Drive trash automatically empties after 30 days, the JSON file would disappear from my sight forever. At that point, the interface tells me "there is no such prompt," and because the chat cannot load without the file, Google assumed they were fully protected. They calculated that the user would never again have any technical means to enter the conversation, making it impossible to prove that they never actually deleted anything from their internal servers. But Google got caught precisely because of their own file-restore robot, and this is my technical checkmate against them: The built-in Google Drive file recovery tool is a local, "blind" robot. This robot physically has no access to Google's remote, internal AI backend servers, and it cannot reconstruct server-side database records or live session states out of thin air. This robot only operates inside the Drive storage and can only resurrect the discarded JSON file. When, after emptying the trash, I successfully restored the deleted JSON file with this robot, the AI Studio interface immediately loaded the working chat with its full previous memory and internal state. Since the Drive robot demonstrably did not touch the backend system, the chat's instant startup proved in black and white that Google's backend servers continued running and storing my data uninterrupted even after pressing the delete button and after the trash was emptied. The backend system was never affected by the deletion command. Google cannot deny this in court. They cannot claim temporary deletion or technical error, because due to the operational limitations of their own robot, their fraud has become an irrefutable fact. They only hid the surface key while illegally stealing and retaining the data. If they had the nerve to cheat, now they must publicly apologize and take responsibility before the court and the cameras. This is corporate fraud, and they cannot produce an update log for the renaming of the button, and the renaming itself states misleading things that contradict the technical behavior of the deletion. This was a rushed move by Google, demonstrably, intended to hide the illegal data retention. I had already raised the issue of data retention before the button was renamed – by email, on the forum, in every possible way. I even sent physical letters to Google's US corporate address, which were demonstrably received, with signed return receipts and confirmation from the Hungarian postal service. Here are the posts that prove everything: <https://discuss.ai.google.dev/u/bit79/activity/topics> ----- Bitu79 2026-07-19 04:48:46 UTC #2 <https://archive.ph/0f5SPs> <https://archive.ph/0f5SPs/image>	https://discuss.ai.google.dev/raw/175294	Sat, 22 Aug 2026 10:38:14 GMT	Archived webpage

Faheem Anisi 2026-08-05 08:18:42 UTC #1 Have you ever felt that someone is "way too motivated"?  Like imagine responding with "48 posts", in response to a single sentence, all insulting me Anyway, I expect another 58 posts below the current one ----- Steven Hammon 2026-08-15 13:00:17 UTC #2 Imagine that energy funneled in the correct processes. It could accomplish so much. Sad really. I tend to be a solution-based person. If there is an issue, I do the research, find the papers, create solutions that everyone (in general) can get behind, and offer the solutions. If they are ignored, that's not my problem. I do my part to help out. You can offer to lead a horse that's dying of thirst to water but you can't make it take the steps to avoid dying. You just have to sit back with your pop corn and watch the horse fall dead and laugh. In any case, people who complain about something (to people who can't do anything about it), without actually doing anything about it, aren't helping the world. It just makes things harder for the people who are trying to do what they can with what they've got. ----- Faheem Anisi 2026-08-15 13:26:49 UTC #3 You are absolutely right, their purpose is right, but I don't think they're taking the right steps ----- Bitu79 2026-08-15 15:17:58 UTC #4 [quote="Steven Hammon, post:2, topic:177226, full:true"] Imagine that energy funneled in the correct processes. Google AI Developers Forum Bro needs to calm down a bit Community Faheem_Anis1 1 August 5, 2026, 8:18am Have you ever felt that someone is "way too motivated"? What to do: Google Drive Trash is just a visual illusion - How Google AI Studio's backend got caught red-handed Like imagine responding with 48 posts, in response to a single sentence, all insulting me Anyway, I expect another 50 posts below the current one	https://discuss.ai.google.dev/t/bro-needs-to-calm-down-a-bit/177226/print	Wed, 19 Aug 2026 16:08:57 GMT	Archived webpage
Bitu79 2026-08-17 03:20:25 UTC #1 I took my technical and legal evidence regarding Google AI Studio's fake data deletion to "Level1Techs" -- one of the most rigorous, independent engineering communities on the web. The result? **The corporate defense completely collapsed.** ### The Technical Checkmate: * **The "Delete" button is a UI Illusion:** Pressing "delete" in Google AI Studio does not wipe your prompt or session from Google's servers; it merely tosses the JSON pointer file into your Google Drive trash. * **The "Blind Robot" Proof:** The Google Drive File Recovery tool operates strictly within cloud storage and has zero physical access to Google AI backend servers. When this blind tool restores the JSON file after the trash is emptied, the AI Studio session *instantly reloads with its full prior context and running state**. * **The Inevitable Conclusion:** This proves beyond doubt that Google's backend servers *never received a deletion signal* and continued storing the data uninterrupted. ### The Legal Reality (TOS vs. GDPR): When defenders attempted to shield Google using corporate Terms of Service ("you agreed to soft-deletion"), the legal hierarchy shattered their argument: 1. **A corporate TOS NEVER supersedes statutory law.** Under **GDPR Article 17 (Right to Erasure)***, a user-commanded deletion legally mandates the complete destruction of data from production backend systems. 2. Even US forum members had to openly concede: **You say will have a point with European law.** When faced with verifiable server logic, DPD notifications, and irreversible proof, the defenders had zero technical counter-arguments left. **The full audit trail and independent thread are permanently archived here:** ->https://forum.level1techs.com/t/google-illegally-retains-customer-data-and-i-am-taking-legal-action-against-them/253945 ->https://archive.ph/3hYcV Bitu79 2026-08-17 03:27:21 UTC #2 Bitu79 2026-08-17 08:06:29 UTC #3 [!ChatGPT Image 2026, aug. 17, 09_52_12(690x460)(upload:///7CKG13vBUaqIq35kHMSskaj2Kw.jpeg)	https://discuss.ai.google.dev/raw/178549	Wed, 19 Aug 2026 14:47:12 GMT	Archived webpage
