MedASR – Outstanding Feedback from Clinicians

Why is Google publicly promoting and encouraging the use of MedASR in "real clinical workflows" when Google's own Terms of Service explicitly prohibit this?

The Gemini API Additional Terms of Service clearly state:

"You may not use the Services in clinical practice, for medical advice, or in any manner that requires regulatory approval for medical devices."

Additionally, the Health AI Developer Foundations (HAI-DEF) documentation

<https://discuss.ai.google.dev/t/it-is-strictly-prohibited-to-build-any-application-that-operates-within-a-clinical-workflow-yet-what-does-google-do-they-congratulate-it-they-promote-it-they-invite-it-into-their-showcase-and-they-actively-encourage-it/177754/print>

In this thread, Google representatives are actively giving tips and technical guidance for an approach that is fundamentally unsafe and non-compliant in healthcare. **This kind of support raises serious responsibility issues: Google must be held accountable for endorsing and assisting a workflow that poses clear patient safety and regulatory risks.**

<https://discuss.ai.google.dev/t/integrating-medgemma-with-langchain-challenges-and-solutions/96247>

[quote="Bitu79, post:10, topic:96247"]

[quote="Frahvar, post:7, topic:96247, full:true"]

Hello @zeerakwyne

System instructions should be prepended to the initial user prompt (see [documentation](https://ai.google.dev/gemna/docs/core/prompt-structure#system-instructions)).

Gemma cookbook has several example notebooks that might be helpful for reference:

- Tool calling: [Gemma function calling](https://github.com/google-gemini/gemna-cookbook/blob/main/Gemna/58Gemma_350Function_calling_with_HF.ipynb), [Gemma Agentic AI](https://github.com/google-gemini/gemna-cookbook/blob/main/Gemna/58Gemma_250Agentic_AI.ipynb), [TideGemma agentic demo](https://github.com/google-gemini/gemna-cookbook/blob/main/TxGemma/ASB7xGemma50Agentic_Demo_with_Hugging_Face.ipynb)
- Minimal example using LangChain with tools: [Gemma LangChain](https://github.com/google-gemini/gemna-cookbook/blob/main/Gemna/58Gemma_2450Using_with_LangChain.ipynb)

Hope this help!

Fereshteh on behalf of HAI-DEF engineering

[/quote]

STOP. This architecture is entirely non-compliant and legally prohibited in a healthcare environment.

Before you write any more custom wrappers or tool-calling hacks, you need to understand that what you are trying to build is a massive regulatory and patient-safety liability.

You are attempting to use experimental, multi-agent LLM loops to handle cervical screening appointments, rescheduling, cancellations, and patient FAQs. In healthcare, this is not a "customer service bot." These workflows require certified, audited, and strictly regulated medical software systems (EU MDR, HIPAA, or local health authority standards), not generative AI agents.

Here is why the entire approach is fundamentally flawed and prohibited:

*** MedGemma is not a certified medical device.**

It is an open-weights research model with no clinical validation, no regulatory approval, and it is not legally permitted to operate as a patient-facing communication or appointment management system.

*** Your workarounds are a safety hazard.**

Bypassing system messages by injecting them into user prompts, and using text-based regex hacks ('tool_code') to interpret API actions, is unacceptable in any real healthcare environment.

Google AI Developers Forum The AI Overview lied, but the AI-mode can no longer deny the reality Gemini API generative-ai Bitu79 1 August 9, 2026, 7:14am 	https://discuss.ai.google.dev/t/the-ai-overview-lied-but-the-ai-mode-can-no-longer-deny-the-reality/177556	Sun, 09 Aug 2026 07:43:18 GMT	Archived webpage
Bitu79 2026-07-19 04:45:14 UTC #1 I stand before Google with the following clear technical evidence that cannot be denied, because it is based on unassailable software logic: When I press the delete button on the Google AI Studio interface, the system uses a deceptive label to lie to me that "my prompt will be permanently deleted after 30 days." In reality, this button does not delete the prompt, does not delete the chat, and does not destroy any backend object. All it does is move the launcher file belonging to the user interface – a simple 350M file – into the trash folder of my Google Drive. Google's diabolical plan was that since the Drive trash automatically empties after 30 days, the 350M file would disappear from my sight forever. At that point, the interface tells me "there is no such prompt," and because the chat cannot load without the file, Google assumed they were fully protected. They calculated that the user would never again have any technical means to enter the conversation, making it impossible to prove that they never actually deleted anything from their internal servers. But Google got caught precisely because of their own file-restore robot, and this is my technical checkmate against them: The built-in Google Drive file recovery tool is a local, "blind" robot. This robot physically has no access to Google's remote, internal AI backend servers, and it cannot reconstruct server-side database records or live session states out of thin air. This robot only operates inside the Drive storage and can only resurrect the discarded 350M file. When, after emptying the trash, I successfully restored the deleted 350M file with this robot, the AI Studio interface immediately loaded the working chat with its full previous memory and internal state. Since the Drive robot demonstrably did not touch the backend system, the chat's instant startup proved in black and white that Google's backend servers continued running and storing my data uninterrupted even after pressing the delete button and after the trash was emptied. The backend system was never affected by the deletion command. Google cannot deny this in court. They cannot claim temporary deletion or technical error, because due to the operational limitations of their own robot, their fraud has become an irrefutable fact. They only hid the surface key while illegally stealing and retaining the data. If they had the nerve to cheat, now they must publicly apologize and take responsibility before the court and the cameras. This is corporate fraud, and they cannot produce an update log for the renaming of the button, and the renaming itself states misleading things that contradict the technical behavior of the deletion. This was a rushed move by Google, demonstrably, intended to hide the illegal data retention. I had already raised the issue of data retention before the button was renamed – by email, on the forum, in every possible way. I even sent physical letters to Google's US corporate address, which were demonstrably received, with signed return receipts and confirmation from the Hungarian postal service. Here are the posts that prove everything: -<https://discuss.ai.google.dev/u/bitu79/activity/topics> ----- Bitu79 2026-07-19 04:48:46 UTC #2 -<https://archive.ph/BF5SP> -<https://archive.ph/BF5SPs/Image>	https://discuss.ai.google.dev/raw/175294	Sat, 08 Aug 2026 10:41:40 GMT	Archived webpage
