Google's Latest Insult: Downgrading a Massive GDPR Data Fraud to a "P4 Cosmetic Bug"

Google really thinks we are complete idiots.

After months of ignoring me, then officially claiming on their Issue Tracker that keeping our deleted chats on their backend servers was "Intended Behavior," they finally panicked. Under the threat of legal action and overwhelming evidence, they reopened the ticket, reproduced the issue, and set it to TRIAGED and ASSIGNED.

And what do they do next? They assign it a ***P4*** priority.

For those who don't know: P4 in Google's system is used for minor, trivial, or cosmetic UI glitches.

Google is deliberately trying to hide a systemic GDPR Article 17 violation—illegally retaining the private data of millions of users for years—behind the mask of a low-priority bug. They got caught red-handed storing supposedly deleted data, they refuse to communicate with me directly, and now they are desperately trying to downplay the severity of their own architecture.

They ignore you, then they lie and call it a feature, then they admit it but label it as a harmless glitch. This blatant corporate bad faith and intentional data hoarding will be the centerpiece of the regulatory investigations. You cannot hide a global privacy

[Intentional Corporate Fraud: How Google Lies with the "Delete" Button in AI Studio \(Proven GDPR Violation\)](#)

Community

Ritu79 1 September 1, 2026, 4:03am

For months, I have been forensically investigating Google AI Studio's data deletion mechanism. What I uncovered is no longer a simple technical bug—it is an extensively documented case of **Intentional Corporate Fraud**. Google's engineers have actively implemented an architecture that systematically ignores basic European privacy laws, especially GDPR Article 17 (Right to Erasure).

Google creates the illusion that once you click the "Delete" button and empty your Google Drive Trash, your data is destroyed. The UI even explicitly warns you: *"The item will be permanently deleted and cannot be recovered later. This action cannot be undone."* **This is an absolute lie.**

To make this completely understandable (even without a coding background), here is the scam they pull on their users:

Think of it as a Public Library:

- Your AI conversations, prompts, and personal data are the **"Books"** placed deep on the shelves inside Google's actual backend servers (API Storage).
- The small JSON file you see stored on your Google Drive is just the **"Library Card"** (the frontend pointer).

When you click "Delete" and permanently empty your trash, Google does not destroy the "Book." **They do not touch your backend data.** All they do is take away your "Library Card" and tear it up, convincing you that the content is gone. The data controller then washes its hands, claiming GDPR compliance.

[COMPREHENSIVE FORENSIC & LEGAL REPORT: Google AI Studio & Google Drive Systematic Data Retention Fraud \(GDPR Article 17 Violation\)](#)

gemini-api

Ritu79 1 August 31, 2026, 7:27am

COMPREHENSIVE FORENSIC & LEGAL REPORT: Google AI Studio & Google Drive Systematic Data Retention Fraud (GDPR Article 17 Violation)

1. The Double Deception: The Lies of the User Interfaces (UI)

Authenticated forensic screenshots (timestamp: August 27, 2026, 07:59:17 CEST) provide undeniable visual evidence that Google presents factually false statements across both user interfaces:

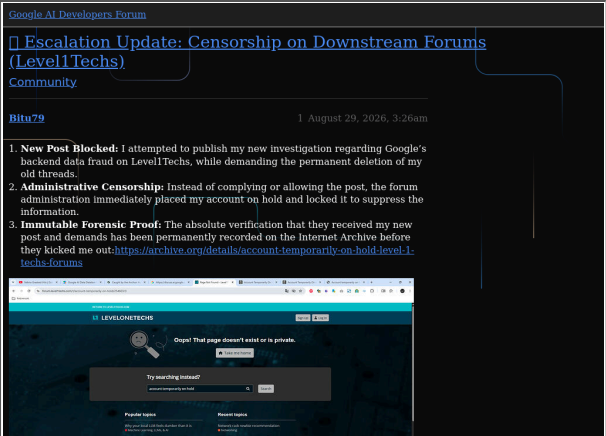

- The Lie on Google Drive: When emptying the trash, Google Drive's explicit dialog box guarantees:
"The item will be permanently deleted and CANNOT BE RECOVERED LATER. This action cannot be undone."
- The Reality: This statement is factually false. Google's own official Drive File Recovery tool restores the file immediately after the trash has been emptied.
- The Lie on Google AI Studio: The AI Studio interface explicitly promises:
"Your prompt will be permanently deleted after 30 days."

Google AI Developers Forum Caught by the Anchor: How Restoring the JSON Exposes Google's Backend Fraud Gemini API gemini-api Bitu79 1 August 26, 2026, 3:37am 1. The JSON is indeed a client-side anchor (Pointer / UI session) Since the system by default stores and chains interactions on the server (previous interaction id, server-side storage), the practical function of the JSON file saved to Google Drive is as follows: Identifiers and UI state: It stores the conversation metadata, the last interaction ID (interaction_id), the interface configurations, and the client-side view. Link to the backend: This file acts as the anchor (or "key") that your browser uses to tell AI Studio which stored conversation chain on Google's server it needs to connect to. 2. What happens during deletion and recovery? When you delete it from Drive: Only the JSON file itself (the anchor/pointer) is moved to the trash and removed from the user interface. Because the interface does not send a separate, definitive destruction command to the server-side storage, the interaction chain remains fully intact on Google's backend. When Drive File Recovery restores the JSON: The file is returned to Drive with its original identifiers. AI Studio opens it, reads the interaction ID from it, and uses the server-side state to instantly and seamlessly resume the conversation. Summary In the Interactions API architecture, the JSON file is not the sole and exclusive carrier	https://discuss.ai.google.dev/t/caught-by-the-anchor-how-restoring-the-json-exposes-googles-backend-fraud/179721/print	Thu, 27 Aug 2026 08:12:01 GMT	Archived webpage
